An Introduction to Optimal Satellite Range Scheduling (Springer Optimization and Its Applications)

Antonio José Vázquez Álvarez, Richard Scott Erwin

The satellite range scheduling (SRS) problem, an important operations research problem in the aerospace industry consisting of allocating tasks among satellites and Earth-bound objects, is examined in this book. SRS principles and solutions are applicable to many areas, including:

- Satellite communications, where tasks are communication intervals between sets of satellites and ground stations
- Earth observation, where tasks are observations of spots on the Earth by satellites
- Sensor scheduling, where tasks are observations of satellites by sensors on the Earth.

This self-contained monograph begins with a structured compendium of the problem and moves on to explain the optimal approach to the solution, which includes aspects from graph theory, set theory, game theory and belief networks. This book is accessible to students, professionals and researchers in a variety of fields, including: operations research, optimization, scheduling theory, dynamic programming and game theory. Taking account of the distributed, stochastic and dynamic variants of the problem, this book presents the optimal solution to the fixed interval SRS problem and how to migrate results into more complex cases. Reference algorithms and traditional algorithms for solving the scheduling problems are provided and compared with examples and simulations in practical scenarios.

From reader reviews:

John Sanchez:

Reading a guide can be one of a lot of pastime that everyone in the world adores. Do you like reading book and so. There are a lot of reasons why people like it. First reading a e-book will give you a lot of new information. When you read a reserve you will get new information because book is one of various ways to share the information as well as their idea. Second, examining a book will make an individual more imaginative. When you looking at a book especially fiction book the author will bring you to imagine the story how the figures do it anything. Third, you can share your knowledge to other individuals. When you read this An Introduction to Optimal Satellite Range Scheduling (Springer Optimization and Its Applications), you may tells your family, friends along with soon about yours publication. Your knowledge can inspire the mediocre, make them reading a reserve.

Jerry Raminez:

People live in this new time of lifestyle always make an effort to and must have the extra time or they will get large amount of stress from both everyday life and work. So , if we ask do people have free time, we will say absolutely of course. People is human not only a robot. Then we question again, what kind of activity do you have when the spare time coming to an individual of course your answer may unlimited right. Then do you try this one, reading publications. It can be your alternative with spending your spare time, the actual book you have read is An Introduction to Optimal Satellite Range Scheduling (Springer Optimization and Its Applications).

Tasha Banda:

As a scholar exactly feel bored to help reading. If their teacher expected them to go to the library or make summary for some publication, they are complained. Just small students that has reading's soul or real their interest. They just do what the instructor want, like asked to the library. They go to right now there but nothing reading very seriously. Any students feel that looking at is not important, boring along with can't see colorful photos on there. Yeah, it is being complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore , this An Introduction to Optimal Satellite Range Scheduling (Springer Optimization and Its Applications) can make you truly feel more interested to read.

Ricardo Huddle:

Reading a book make you to get more knowledge from it. You can take knowledge and information coming from a book. Book is published or printed or outlined from each source in which filled update of news. On this modern era like now, many ways to get information are available for you actually. From media social similar to newspaper, magazines, science publication, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Ready to spend your spare time to spread out your book? Or just

seeking the An Introduction to Optimal Satellite Range Scheduling (Springer Optimization and Its Applications) when you desired it?
