Structure of Materials: An Introduction to Crystallography, Diffraction and Symmetry Marc De Graef, Michael E. McHenry

Blending rigorous presentation with ease of reading, this self-contained textbook covers the fundamentals of crystallography, symmetry and diffraction to several classes of materials. The first half of the book is a systematic treatment of the basics of crystallography, discussing bonding, crystal systems, symmetry, point groups and concepts of diffraction. The latter half is more advanced in scope, applying structural determination methods to the study of a broad range of materials, including metallic, ceramic, covalent, amorphous, molecular solids and nanomaterials. Throughout the text, mathematical theory and abstraction is complemented by a highly visual approach, allowing the reader to fully comprehend crystal structure. With over 430 illustrations, 400 homework problems and crystal structure files, this is suitable for advanced undergraduate or graduate courses on crystallography within materials science and engineering. Additional resources for this title including solutions for instructors, data files for crystal structures, and appendices, are available at www.cambridge.org/9780521651516.

From reader reviews:

Adria Jenkins:

The book Structure of Materials: An Introduction to Crystallography, Diffraction and Symmetry can give more knowledge and information about everything you want. Why must we leave the great thing like a book Structure of Materials: An Introduction to Crystallography, Diffraction and Symmetry? A number of you have a different opinion about e-book. But one aim that will book can give many details for us. It is absolutely correct. Right now, try to closer with your book. Knowledge or information that you take for that, you can give for each other; it is possible to share all of these. Book Structure of Materials: An Introduction to Crystallography, Diffraction and Symmetry has simple shape nevertheless, you know: it has great and massive function for you. You can seem the enormous world by open up and read a e-book. So it is very wonderful.

Emily Carey:

The publication with title Structure of Materials: An Introduction to Crystallography, Diffraction and Symmetry includes a lot of information that you can discover it. You can get a lot of gain after read this book. That book exist new expertise the information that exist in this reserve represented the condition of the world at this point. That is important to yo7u to be aware of how the improvement of the world. This book will bring you with new era of the glowbal growth. You can read the e-book with your smart phone, so you can read it anywhere you want.

Helen Leavitt:

In this age globalization it is important to someone to get information. The information will make someone to understand the condition of the world. The condition of the world makes the information quicker to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You can see that now, a lot of publisher which print many kinds of book. Often the book that recommended for your requirements is Structure of Materials: An Introduction to Crystallography, Diffraction and Symmetry this publication consist a lot of the information from the condition of this world now. This kind of book was represented how does the world has grown up. The terminology styles that writer use to explain it is easy to understand. The actual writer made some study when he makes this book. This is why this book suited all of you.

Ryan Walker:

What is your hobby? Have you heard that will question when you got students? We believe that that question was given by teacher to the students. Many kinds of hobby, Everybody has different hobby. And you also know that little person such as reading or as reading through become their hobby. You should know that reading is very important in addition to book as to be the issue. Book is important thing to incorporate you knowledge, except your personal teacher or lecturer. You see good news or update concerning something by

book. Numerous books that can you decide to try be your object. One of them is this Structure of Materials: An Introduction to Crystallography, Diffraction and Symmetry.
