Sasquatch Rising 2013: Dead Giants Tell No Tales: How DNA Breakthroughs and Backyard Visits Reveal the Greatest Story of Our Time Christopher Noël

Dr. Melba Ketchum's DNA study has found that Sasquatch arose long ago through crossbreeding between female Homo sapiens and males of another primate species, now extinct. Though the latter remains unidentified, it was almost certainly a fellow member of our Homo family tree. The uncanny humanness of Sasquatch has never been in doubt at "habitation sites," places with which they have become familiar, returning regularly to homes and properties, often for years on end. Throughout North America, certain people have interacted with these curious, wily visitors and—in the humane, inquisitive spirit of Jane Goodall—sought to foster (so to speak) an ongoing family reunion. Meanwhile, hunters are active in our forests, each hoping to become wealthy and famous by "harvesting" a specimen and hauling that first giant corpse before the public. This event will certainly change the world but will also mark a low point in the history of human ego. While feeding our hunger for material proof, it will leave us at a loss for deeper understanding. Therefore, ahead of that dark day, we must welcome an immediate flowering of vivid accounts showing all that peacefully occurs between our two species. I hope that the detailed testimonials presented in this and other books will help to establish legal protection by assembling a rich, highly textured infrastructure of knowledge and compassion—the best barrier standing between Sasquatch and its would-be trophy hunters. SASQUATCH RISING 2013 is the only available source to not only delve into the scientific revolution unfolding before us today but also to fill in the rest of the story, conducting readers behind the scenes at multiple habituation sites—in Iowa, New York State, North Carolina, Oklahoma, Texas, and Vermont—to reveal the subtle, surprising ways of our ancient living kin.
